base de phosphore OP2 qui ne "migre" pas. Ce même phosphore entre également dans la composition de l'encre lithographique.

Un petit nombre de timbres ont été marqués avec du phosphore ayant tendance à "migrer". Ils ont été imprimés entre mars et octobre 1972 et il s'agit des émissions suivantes:

- 8c. courant en feuillets de 100
- Carnets de 25c. pour distributeurs automatiques
- Carnets de 50c. pour distributeurs automatiques
- 8c. Journée mondiale de la santé
- 8c. Frontenac
- 10c., 15c., 25c. et 50c., timbres courants de valeur moyenne
- 8c. Indiens des Plaines – Costume et symboles graphiques seulement.

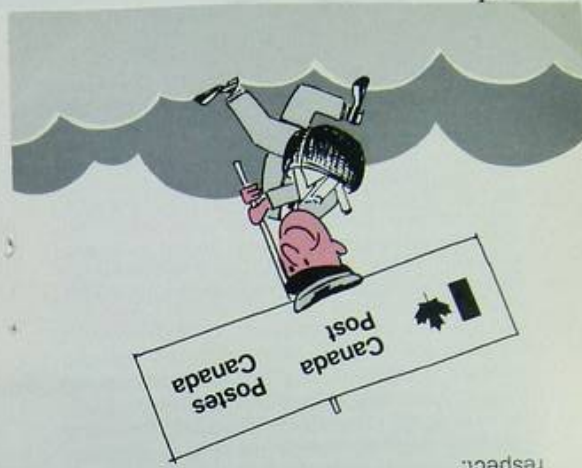

Pour tous les autres timbres marqués Ottawa/général et autres émis depuis le mois d'octobre, on a utilisé un phosphore qui ne "migre" pas.

**COMMENT EMPÊCHER LE PHOSPHORE DE "MIGRER"**

Les essais effectués montrent qu'un papier d'acétate transparent comme celui dont sont fabriquées les charnières pour timbres vendues dans le commerce empêche les marquages de "migrer" dans les albums de timbres.

**EFFAÇAGE**

Certains phosphores ont tendance à s'effacer lorsque le timbre entre au contact d'un autre timbre ou lorsqu'on le tient entre des pinces, entre ses doigts ou qu'on le frotte sur une surface de travail. C'est le cas du phosphore OP4 et des timbres marqués Winnipeg. Le phosphore OP2 qui ne "migre" pas utilisé pour le marquage Ottawa/général n'a pas cette tendance ou sinon très peu.

There is a tendency of some phosphors to rub-off, physically, from stamp to stamp, or onto tweezers, fingers or working surfaces. The OP4 may be guilty of this as is Winnipeg tagging. The non-migrating Ottawa/General tagging OP2 has little or no tendency in this respect.

**RUB OFF**

Tests demonstrate that a clear acetate material such as used in commercial stamp mounts will effectively prevent migration in a collector's album.

**PREVENTION OF MIGRATION**

All other "Ottawa/General Tagged" issues and all printings since October were made with a phosphor material and process which does not migrate.

- 8c Definitive in sheets of 100
- 25c Vending Booklets
- 50c Vending Booklets
- 8c World Health Day
- 8c Frontenac
- 10c, 15c, 20c, 25c and 50c Medium Value Definitives
- 8c Plains Indians – Costume and Graphic Symbolism only

October 1972 of the following: They are printings made between March and

A limited variety of stamps were tagged with the "migrating" type phosphor ink. Through continual research and testing, a successful gravure ink was produced using the non-migrating phosphor OP2 that is also used in the lithographic process.
